
40 finite D/U worlds; 360 declared class strata. Coverage gate: FAILED.
Original-identity phase controls 30/30; scored delay-zero 109/120; RV02 18/24 below 80%.
All selected observations remain in denominators, including lost and shared targets. Stable transmission requires two unchanged edges.
Missing strata are hatched; measured zero is numeric. Recovery after isolation does not establish benefit or total viable population.
