V01, elapsed age 0, layout A; full 192×192 periodic grids and literal nine-state colors.
D removes one complete clone: one third of occupied cells and of each occupied-state count; cores 3→2. U retains all three.
This complete preparation was observed under protocol009; replay is a deterministic check, not a new confirmation.
Q/R/C classify the source census through separate isolation assays; native ancestry and total viable population remain unresolved.
